

Question 1: write me python function to sort an array

Answer 1: Sure! Here is an example of a Python function that sorts an array:````python

# Function to sort an array

```
def sort_array(arr):
```

```
    arr.sort()
```

```
    return arr
```

# Example usage

```
arr = [3, 1, 4, 1, 5, 9, 2, 6, 5, 3, 5]
```

```
sorted_arr = sort_array(arr)
```

```
print(sorted_arr)
```

```
````
```

Question 2: what is this file about?

Answer 2: The provided document is a Node.js Express application file. It sets up an Express server that listens on port 3000. It also includes routes for handling categories related to an admin interface using the 'categoriesRoutes' file. The application uses the mysql2 package for interacting with a MySQL database. The '/' route responds with 'Hello, World!' when accessed.
