User new question: how to wite hello world in node js
User new question: how to wite

Question 2: how to wite hello world in node js

Answer 2: To write 'Hello, World!' in Node.js, you can create a simple Express server that listens on a specified port and sends 'Hello, World!' as a response when a GET request is made to the root URL. Here is an example based on the provided document:```javascript

```javascript
const express = require('express');
const app = express();
const port = 3000;
const mysql = require('mysql2');
const adminRoutes = require('./routes/categoriesRoutes');

app.use(express.json());

app.use('/admin/category', adminRoutes);
```

```
app.get('/', (req, res) => {
    res.send('Hello, World!');
});

app.listen(port, () => {
    console.log(`Server is running on port ${port}`);
});
```
